## Career Objective

MCA graduate (2025) currently pursuing AI-Integrated Python Full Stack Development training, with technical skills in Python, SQL, HTML, CSS, JavaScript, AWS, and AI fundamentals. Eager to apply programming and web development skills to real-world projects and begin a career as a Python Full Stack Developer.

## Technical Skills

- **Programming:** Python, JavaScript
- **Frontend Development:** HTML5, CSS3, Responsive Web Design
- **Database:** SQL
- **Cloud Computing:** AWS
- **AI Skills**: AI Fundamentals, Prompt Engineering, RAG

## Education

- **Annamacharya Institute of Technology and Sciences | Kadapa** *04/2025*
  Master of Computer Applications in Computer Science
- **Yogi Vemana University | Kadapa** *08/2021*
  Bachelor of Commerce (Computer Applications)

## Professional Projects

**Scalable Cloud Database Infrastructure** | 2026

- Designed and deployed a secure cloud infrastructure using AWS with a custom VPC and EC2 instances.
- Configured database servers for secure communication and reliable application hosting.
- Improved application availability and data security through cloud networking. End-to-End E-commerce

**End-to-End E-commerce Database Engine** | 2026

- Designed and developed a scalable SQL database for an e-commerce application with 10+ entities.
- Implemented B-tree indexing and SQL triggers to improve query performance and automate stock management.
- Ensured data integrity across inventory and payment modules.

**AI Finance Manager | Personal Finance Management Application** | 2026

- Developed an AI-powered finance management application to track and manage income and expenses in one place.
- Implemented category-wise expense tracking to organize spending and help users understand their financial habits.
- Designed a financial dashboard to display income, expenditure, and expense breakdowns for easier financial monitoring.
- Integrated AI-driven features to enhance financial insights and support informed money management decisions.

**Vehicle Accident Prevention System (IoT) | MCA Project** | 2023–2025

- Developed an IoT-based accident prevention system using sensors and microcontrollers for real-time monitoring.
- Processed sensor data to detect potential hazards and support timely safety responses.
- Focused on improving road safety through real-time embedded system integration.

## Certifications

- Python for Beginners | Simplilearn SkillUp
- Foundations of Prompt Engineering | AWS Skill Builder
- SQL and Relational Databases | IBM Cognitive Class
- Responsive Web Design Certification | freeCodeCamp
- AWS Certified Cloud Practitioner | Amazon Web Services (AWS)

## Internship & Professional Training

**Full Stack Web Development Intern | MindSparc | Feb 2025 – May 2025**

- Completed a hands-on internship in Full Stack Web Development.
- Worked on practical assignments and project-based learning.
- Strengthened practical skills in frontend, backend, and database development through hands-on assignments.

**AI-Integrated Python Full Stack Development (Ongoing)**

- Currently pursuing training in Python Full Stack Development with AI, gaining hands-on experience in web development, database management, cloud technologies, and AI fundamentals.
